Description

The electrode filled with liquid KCl is used in media with very low conductivities ($\geq 1 \mu\text{S/cm}$), for example in high-purity water analysis or boiler feed water analysis. It is used as well in applications where the high concentration of organic solvents or alcohols which do not allow the use of a maintenance-free KCl gel filled electrode.

The electrode can be used up to a maximum pressure of 8 bar with back-pressure loading. A built-in temperature sensor Pt 100 is available as an option.

The length of the electrode is 120 mm. The connection head is a conduit thread 13.5 screwing.

Connection cable model APK-X is required when using the electrode.
