

## Antibody Datasheet

<b>Product Name:</b>	Mouse anti <i>Streptococcus pneumoniae</i>
<b>Clone number:</b>	SN3
<b>Isotype:</b>	Mouse IgG <sub>3</sub>
<b>Product code:</b>	MAB12155-100
<b>Batch Number:</b>	
<b>Amount:</b>	0.1mg
<b>Concentration:</b>	1 mg/ml
<b>Buffer:</b>	Phosphate Buffered Saline pH7.4
<b>Preservative:</b>	0.09% Sodium Azide (NaN <sub>3</sub> )
<b>Purification:</b>	The antibody was purified by affinity chromatography on protein A
<b>Specificity:</b>	This antibody is specific for <i>Streptococcus pneumoniae</i> detection. The antibody does not cross react with <i>Legionella pneumophila</i> .
<b>Applications:</b>	ELISA

**Antigen background:** *Streptococcus pneumoniae* (*S. pneumoniae*) is a lancet-shaped, gram-positive, facultative anaerobic bacterium. Reports suggest that there are approximately 90 distinct serotypes of *Streptococcus pneumoniae* of which a small number cause significant global pathological disease ([WHO](#)).

In humans, *S. pneumoniae* primarily colonizes the nasopharynx and transmission occurs from person-to-person via respiratory secretions from patients infected *S. pneumoniae*, and healthy carriers. In susceptible individuals, the bacteria can spread to the lower respiratory tract, the inner ear or sinuses causing different types of

illness referred to as pneumococcal disease. Pneumococcal disease includes pneumonia, sepsis, acute otitis media and meningitis. Symptoms of pneumococcal pneumonia include fever, chills, cough, malaise, difficulty breathing and chest pain. The symptoms of bacterial meningitis include headache, lethargy, neck stiffness, vomiting, fever, photophobia and coma ([CDC](#)).

Worldwide, *S. pneumoniae* is the major cause of pneumonia, sepsis, and meningitis and is the leading cause of community acquired pneumonia in young children and the elderly.

**Storage:**

Store at +4°C for up to three months, or at -20°C for longer.  
The Antibody is shipped at ambient temperature.  
Avoid repeated freeze/thaw cycles.
