PRODUCT DATA SHEET

Product Name: ANTI-PHOSPHO-Ser^{152/156} MARCKS ANTIBODY

Product Code: P40018-100

Pack Size: 100 μL

Description: Myristoylated Alanine-Rich C Kinase Substrate (MARCKS) is a major substrate for phosphorylation by protein kinase C (PKC) (Ouimet et al., 1990). The phosphorylation of Ser^{152/156} can be used as a measure of PKC activation although these sites are also phosphorylated by PRK1 (Palmer et al., 1996) MARCKS is a member of a family of calmodulin binding proteins and phosphorylation of Ser^{152/156} modulates the binding of MARCKS to calmodulin (Verghese et al., 1994).

Physical State: Liquid; Buffer contents: 10 mM

HEPES (pH 7.5), 150 mM NaCl, 100 µg per mL BSA and 50% glycerol

Storage/Stability: Stable at -20 °C for at least 1 year.

For long term storage -20 °C is

recommended

Purification Prepared from rabbit serum by **Method:** affinity purification via sequential

chromatography on phospho- and dephosphopeptide affinity columns.

Shipping Domestic: Blue Ice

Conditions: International: Blue Ice or Dry Ice

Host Species: Rabbit (Polyclonal)

*M*r (kDa): 87

Immunogen: Phosphopeptide corresponding to amino acid residues surrounding the phospho-Ser $^{152/156}$ of MARCKS. Specific for the ~87k MARCKS protein phosphorylated at Ser 152 and Ser 156 in Western blots. Immunolabeling is blocked by the phosphopeptide used as the antigen but not by the corresponding dephosphopeptide. The immunolabeling is completely eliminated by λ-phosphatase.

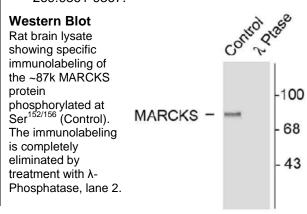

Species Reactivity: The antibody has been directly tested for reactivity in Western blots with rat tissue. It is anticipated that the antibody will react with bovine, chicken, human, mouse, Xenopus and zebra fish based on the fact that these species have 100% homology with the amino acid sequence used as antigen.

Recommended Antibody Dilutions:

WB: 1:1000
