## SALM 3

Cat.No. 294-3P; control peptide, 100 µg peptide (lyophilized)

## **Data Sheet**

Reconstitution/ Storage	100 μg peptide, lyophilized. For reconstitution add 100 μl H <sub>2</sub> O to get a 1mg/ml solution in PBS. Then aliquot and store at -20°C until use. Control peptides should also be stored at -20°C when still lyophilized!
Immunogen	Synthetic peptide corresponding to AA 595 to 608 from mouse Salm3 (UniProt Id: Q80XU8)
Recommended dilution	Optimal concentrations should be determined by the end-user.
matching antibodies	294 303
Remarks	This control peptide consists of the synthetic peptide (aa 595-608 in mouse SALM 3 precursor) that has been used for immunization. It has been tested in preadsorption experiments and blocks efficiently and specifically the corresponding signal in Western blots. The amount of peptide needed for efficient blocking depends on the titer and on the affinity of the antibody to the antigen.

## TO BE USED IN VITRO / FOR RESEARCH ONLY NOT TOXIC, NOT HAZARDOUS, NOT INFECTIOUS, NOT CONTAGIOUS

Synaptic adhesion-like molecules (SALMs) are a family of cell adhesion molecules also known as LRFN (leucine-rich repeat and fibronectin III domain-containing). They are involved in neurite outgrowth and synapse formation.

SALM 1, **2**, and **3** contain a cytoplasmic C-terminal PDZ-binding motif which is not present in SALM **4** and 5.
