Tau

Cat.No. 314 011; Monoclonal mouse antibody, 100 µg purified IgG (lyophilized)

Data Sheet

· · · · · · · · · · · · · · · · · · ·		
IP: yes ICC: 1: 200 up to 1: 500 IHC: 1: 100 IHC-P/FFPE: 1: 500 Clone 248E5 Subtype IgG2a (κ light chain) Immunogen Recombinant protein corresponding to AA 3 to 214 from mouse Tau (UniProt Id: P10637) Epitop Epitop: AA 3 to 214 from mouse Tau (UniProt Id: P10637) Reactivity Reacts with: rat (P19332), mouse (P10637). Weaker signal: human (P10636). No signal: zebrafish. Other species not tested yet. Specificity Specific for tau. matching control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein	•	reconstitution add 100 μl H ₂ O to get a 1mg/ml solution in PBS. Then aliquot and
Subtype IgG2a (κ light chain) Immunogen Recombinant protein corresponding to AA 3 to 214 from mouse Tau (UniProt Id: P10637) Epitop Epitop: AA 3 to 214 from mouse Tau (UniProt Id: P10637) Reactivity Reacts with: rat (P19332), mouse (P10637). Weaker signal: human (P10636). No signal: zebrafish. Other species not tested yet. Specificity Specific for tau. matching control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein	Applications	IP: yes ICC: 1: 200 up to 1: 500 IHC: 1: 100
Immunogen Recombinant protein corresponding to AA 3 to 214 from mouse Tau (UniProt Id: P10637) Epitop Epitop: AA 3 to 214 from mouse Tau (UniProt Id: P10637) Reactivity Reacts with: rat (P19332), mouse (P10637). Weaker signal: human (P10636). No signal: zebrafish. Other species not tested yet. Specificity Specific for tau. matching control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein	Clone	248E5
P10637) Epitop Epitop: AA 3 to 214 from mouse Tau (UniProt Id: P10637) Reactivity Reacts with: rat (P19332), mouse (P10637). Weaker signal: human (P10636). No signal: zebrafish. Other species not tested yet. Specificity Specific for tau. matching control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein.	Subtype	IgG2a (κ light chain)
Reacts with: rat (P19332), mouse (P10637). Weaker signal: human (P10636). No signal: zebrafish. Other species not tested yet. Specificity Specific for tau. matching control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein.	Immunogen	· · · · · · · · · · · · · · · · · · ·
Weaker signal: human (P10636). No signal: zebrafish. Other species not tested yet. Specificity Specific for tau. matching 314-0P control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein	Epitop	Epitop: AA 3 to 214 from mouse Tau (UniProt Id: P10637)
matching 314-0P control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein	Reactivity	Weaker signal: human (P10636). No signal: zebrafish.
control Remarks WB: Detects the mouse protein with much greater sensitivity than the rat protein	Specificity	Specific for tau.
g. cool. g. co	_	314-0P
The antibody binds phosphorylated and non-phosphorylated tau proteins.	Remarks	WB : Detects the mouse protein with much greater sensitivity than the rat protein. The antibody binds phosphorylated and non-phosphorylated tau proteins.

TO BE USED IN VITRO / FOR RESEARCH ONLY NOT TOXIC, NOT HAZARDOUS, NOT INFECTIOUS, NOT CONTAGIOUS

There are two major classes of heat stable microtubule associated proteins (MAPS): MAP 2 (280 kD), and **tau** (55-65 kD). Both protein classes are involved in the regulation of microtubule polymerization in cells. Tau is a neuronal protein that mainly localizes to axons. Hyperphosphorylated tau has been shown to be a major element of paired helical filaments in Alzheimer's disease.
