

## VDAC 1

Cat.No. 279 003; Polyclonal rabbit antibody, 50 µg specific antibody (lyophilized)

### Data Sheet

Reconstitution/ Storage	50 µg specific antibody, lyophilized. Affinity purified with the immunogen. Rabbit serum albumin was added for stabilization. For reconstitution add 50 µl H <sub>2</sub> O to get a 1mg/ml solution in PBS. Then aliquot and store at -20°C until use.
Applications	<b>WB:</b> 1 : 1000 (AP staining) <b>IP:</b> not tested yet <b>ICC:</b> not recommended <b>IHC:</b> not recommended <b>IHC-P/FFPE:</b> not tested yet
Immunogen	Synthetic peptide corresponding to AA 15 to 29 from mouse VDAC1 (UniProt Id: Q60932-1)
Reactivity	Reacts with: rat (Q9Z2L0), mouse (Q60932). Other species not tested yet.
Specificity	Due to sequence homologies, probably crossreacts with VDAC 2 and 3
matching control	279-0P

**TO BE USED IN VITRO / FOR RESEARCH ONLY**  
**NOT TOXIC, NOT HAZARDOUS, NOT INFECTIOUS, NOT CONTAGIOUS**

Voltage-dependent anion channels (**VDACs**), also known as **porins**, are integral membrane proteins which form a channel that allows diffusion of small hydrophilic molecules. Three closely related isoforms, VDAC 1, 2 and 3 have been described, so far. VDACs have been originally identified as components of the outer mitochondrial membrane but they also occur in the plasma membrane of different cell types.
