Our General purpose absorbent socks are, probably, the best choice for most industrial and commercial applications. Our socks absorb both oil and water base liquids an non-aggressive fluids. They are easy to mould and shape around equipment and machinery.

Our GENERAL PURPOSE absorbents will handle any spill from many solvents to oils and common fluids (with the exception of aggressive chemicals). Check out our chemicals list for more details

Our absorbent cushions can absorb liquids from the floor like a sock, trap leaks like a pan and absorb spills like a pad – many uses -- one product. They are easy to use making them ideal for any spill response situation. You can stack them up and use them like a wall of sandbags. Use them in those hard-to-reach areas – tight spaces under machines and leaky hydraulic hoses or stuff them in corners cramped for space. Or with our drip pans they provide the perfect solution to leaky drum taps

Our GENERAL PURPOSE absorbents will handle any spill from many solvents to oils and common fluids (with the exception of aggressive chemicals). Check out our chemicals list for more details
