## PST21A Standard product AC-DC 1200W Conduction cooled

### Features

- ▶ 85-264Vac or 120-350Vdc input voltage ranges
- ▶ 1-6 isolated outputs up to 1200W
- ▶ 255\*127\*40mm very low profile
- ▶ Power Factor Correction EN61000-3-2
- ▶ Active very low inrush limitation
- ▶ Surge and transient protection
- ▶ Many output configurations available
- ▶ Conduction cooled 100°C baseplate. No derating.

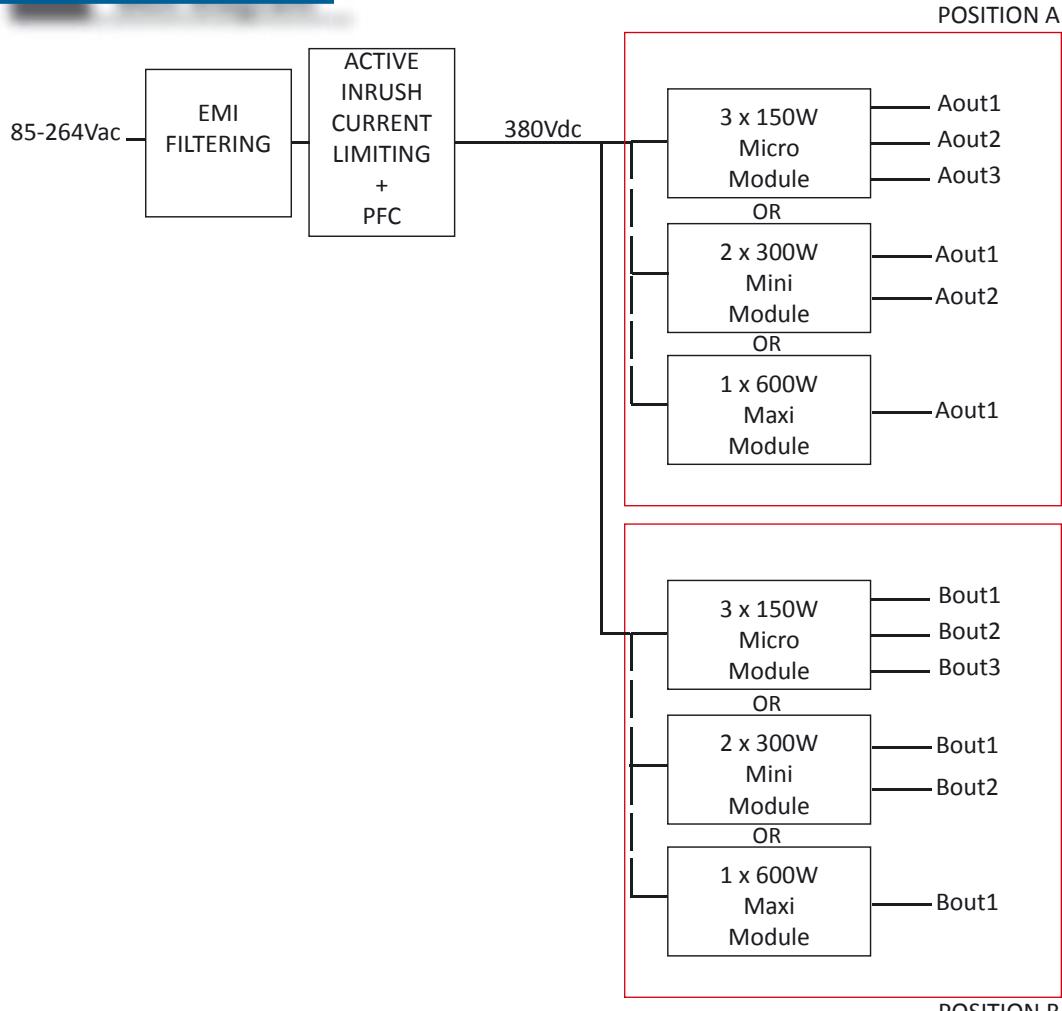

Safety IEC/EN 60950-1, RoHS lead-free-solder compliant

### Description

The PST21A, very compact and low profile AC-DC power supply up to 1200W in chassis format, incorporates input filtering, input and output protections, very robust mechanical mounting and connection, conformal coating and MIL-STD options required in most of the severe environment for industrial, defense applications. The psu provides high reliability thanks to the integration of Vicor Corp. modules, high efficiency, input-to-output isolation, soft start and **active very low inrush circuit**, overtemperature protection, input over/undervoltage lockout. The psu is configurable with 1 to 6 outputs in many output voltages from 2V to 54Vdc, other outputs are even possible as semi-standard versions. They are continuously short-circuit proof. The 100°C baseplate allows operation in high temperature environment.

### Bloc diagram

## Options Description

### MIL-STD ruggedized (-M)

Meet MIL-STD 461E CE102, MIL-STD 1399-300A, MIL-STD810E shock & vibrations. No Laboratory certification.

### -40°C operation (-T)

The thermal grade of the Vicor the DC/DC converters used and other components are changed to comply with low ambient temperature.

### Conformal coating (-V)

During manufacturing process , when V option is specified, components and pcb are covered with an acrylic coating to address high level of ambient humidity application.

### Heatsink (-H, -H1)

-H: a 15 mm heatsink is mounted on the baseplate with longitudinal fins.

-H1: a 15 mm heatsink is mounted on the baseplate with transversal fins.

## Input

### Electrical Input Data

Input					Unit
Characteristics	Conditions	min	typ	max	
Operating input voltage		85		264	Vac
Operating input voltage		120		350	Vdc
Frequency		44	50	440	Hz
Power Factor	230Vac, 50Hz, Pnom.		0,96	0,98	
Input current	At Vin min			16	A
No-load input power	At Vin typ		15		W
Peak inrush current	Vin max		4		A
Start-up time			3		s

### Input Fuse

A fuse mounted inside the psu protects against damages in case of a failure. The fuse is not user-accessible without opening the unit. In DC mode, reverse polarity at the input is protected and will not cause the fuse to blow .

Model	Fuse type	Rating	Reference
PST21A	Littlefuse	15A	0218015.MXP

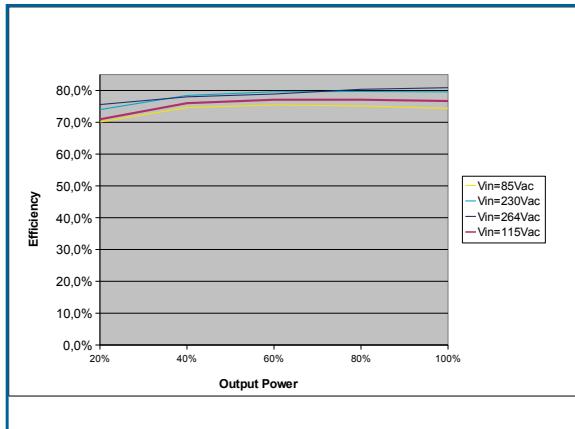

### Input Transient Protection

A VDR (Voltage Dependent Resistor) and a common mode input filter form an effective protection against input transients in severe environments.

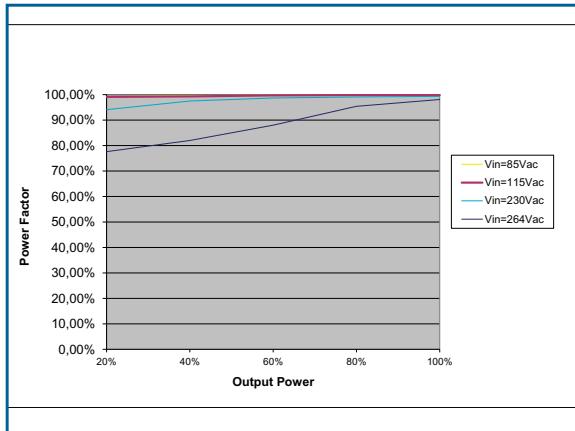

### Establishment time curve at 230Vac - PST21A-5300-48150-550-3V375

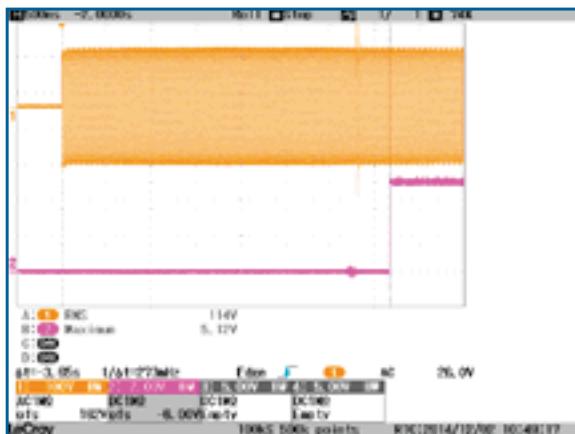

Efficiency curve - PST21A-5300-48150-550-3V375

Power factor curve - PST21A-5300-48150-550-3V375

Establishment time curve at 115Vac - PST21A-5300-48150-550-3V375

## Output

### Electrical Output Data

General conditions : 25°C ambiant. For each output voltage max power configuration.

PST21A can be equipped with up to two boards of the models below (mix possible example 1 Maxi board + 1 Micro board )																				Unit			
Output	3V3			5V			12V			15V			24V			28V			48V			Unit	
Characteristics	Conditions	min	typ	max	min	typ	max	min	typ	max	min	typ	max	min	typ	max	min	typ	max	min	typ	max	Unit
Output voltage		3V3			5			12			15			24			28			48		V	
Trim range	Factory set	3	3,6	4,5	5,5	10,8	13,2	13,5	16,5	21,6	26,2	25,2	30,8	43,2	51,8							V	
Oversupply protection			4,5		6,5			14,9			18,5			29,1			34			58		V	
Output noise	20MHz	75			75			100			100			100			100			150		mVpp	
Efficiency		75			83			85			84						83			84		%	
Load Regulation	Vin nom.		1		1			0,5			0,5			0,4			0,4			0,4		%	
<b>Double Maxi Board (2M)</b>		Each board includes 2 identical Maxi modules in parallel for high power configuration																					
Output current		0	160	0	160	0	100	0	80	0	50	0	43	0	25	0	12,5	0	6,25	A			
Max. power			528		800		1200		1200		1200		1200							1200		W	
Output current limit		184	208	184	208	115	135	92	112	58	78	48	58	28	34	14	17	7,2	8,2	A			
<b>Maxi Board (M)</b>		Each board includes 1 Maxi module below																					
Output current		0	80	0	80	0	50	0	40	0	25	0	21,5	0	12,5	0	6,25	0	3,1	A			
Max. power			264		400		600		600		600		600							600		W	
Output current limit		92	104	92	108	57,5	67,5	46	56	29	39	24	29	14	17	12,5	14,5	7,2	8,2	A			
<b>Mini Board (m)</b>		Each board includes up to 2 Mini modules below																					
Output current		0	45	0	40	0	25	0	20	0	12,5	0	10,7	0	6,25	0	3,1	0	1,5	A			
Max. power			150		200		300		300		300		300							300		W	
Output current limit		54	64	46	52	29	35	23	26	14,5	17	12,5	14,5	7,2	8,2	3,6	4,4	1,5	1,5	A			
<b>Micro Board (<math>\mu</math>)</b>		Each board includes up to 3 Micro modules below																					
Output current		0	22,7	0	20	0	12,5	0	10	0	6,25	0	5,3	0	3,1	0	1,5	0	0,75	A			
Max. power			75		100		150		150		150		150							150		W	
Output current limit		25	31	23	26	14,5	17	11	14	7,2	8,2	6,2	7	3,6	4,4	1,5	1,5	0,75	0,75	A			

See "options and configurations" section for all the power possibilities.

## Parallel operation & current share

Parallel operation is possible in the same unit or between different units for Miniboards, Maxiboards and Dual Maxiboards with active current sharing through the PR signal. The outputs put in parallel **MUST** be exactly the same, all OUT+ connected together and all OUT- connected together when PR are linked (risk of damage otherwise).

## Redundant Systems Operation

When systems require a very high level of reliability and should work normally in the event of a failure, N+1 redundancy is implemented where N is the number of converter to support power requirement. If one converter fails, the remaining ones still delivers the power to the loads.

Redundant operation requires external diodes.

## Hold-up time

The psu provides internal hold-up time.

## Output Current Limitation

All outputs are continuously protected against short-circuit by a constant current limitation (no foldback) with automatic recovery. See Page 2 for the value.

## Thermal Considerations

When a converter is mounted in conduction cooled, the temperature measured on the baseplate should not exceed 100°C.

When heatsink option is used in convection cooling and is operating at its nominal output power at the max. ambient temperature, the temperature measured on the heatsink should not exceed 100°C.

## Thermal protection

A temperature protection (OTP) is integrated in each output module, disabling output when baseplate temperature exceeds 105°C (+/-5°C). The converter automatically restarts, when the temperature drops below 70°C. Nevertheless, exceeding the max operating temperature may cause failures of the converter.

## Overvoltage protection

An OVP is incorporated on each output. All outputs are cut if an OVP is detected. This protection is latch style (Recovery after AC reset or inhibit).

## Auxiliary Functions

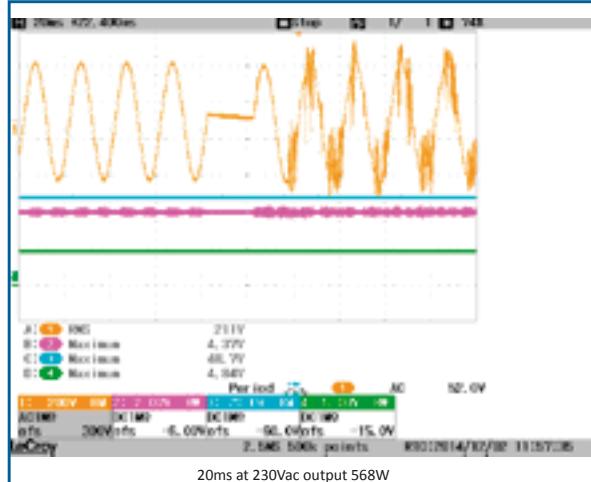

### Remote On/Off (INHIB)

An isolated INHIB signal disables corresponding output voltage when connected to RTN. - outputs inhibited : INH level LOW

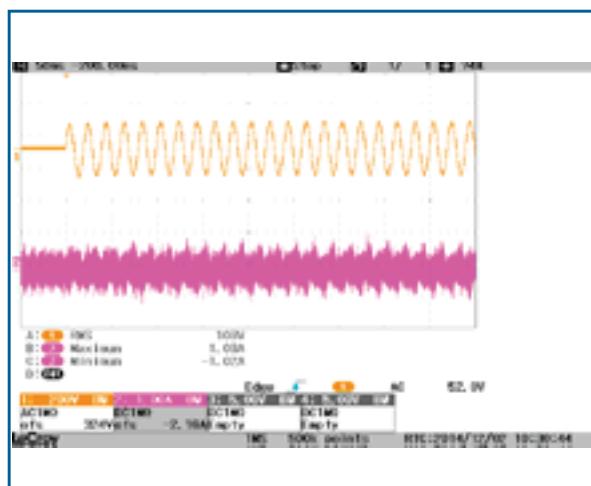

### Output Voltage Adjustment (ADJ)

Output can be adjusted 90-110% Vnom. with the potentiometer at the output side or by an external voltage 0,6 to 1,25V max. referred to RTN.

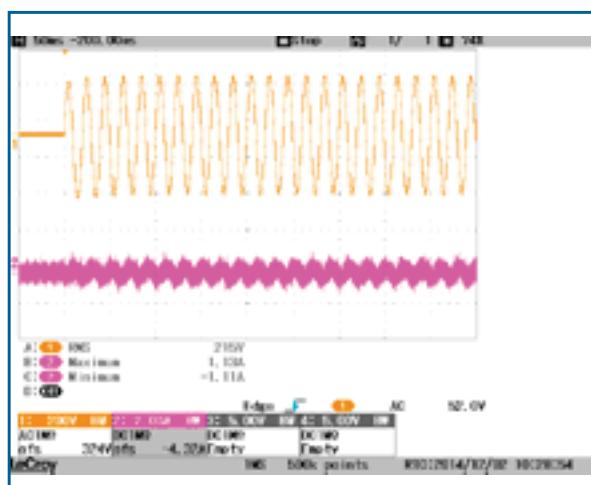

## Input Power Break - PST21A-5300-48150-550-3V375

## Inrush current at 115Vac - PST21A-5300-48150-550-3V375

## Inrush current at 230Vac - PST21A-5300-48150-550-3V375

## Remote Senses (+S -S)

This feature enables compensation of voltage drop across the connector contacts and the load lines. Remote Sense, max 0,5V per line compensation (If local sense, connect locally S+ to OUT+ and S- to OUT- of the corresponding output). Senses are not included on Microboard.

Output type	Total drop	Positive line drop
V1, V2	< 0.5V	< 0.25V

## PowerGood & LED

Collector isolated optocoupled signal referred to RTN, closed when all outputs voltages are OK. Led is also available for each output.

## Auxiliary bias voltage (+5VAUX)

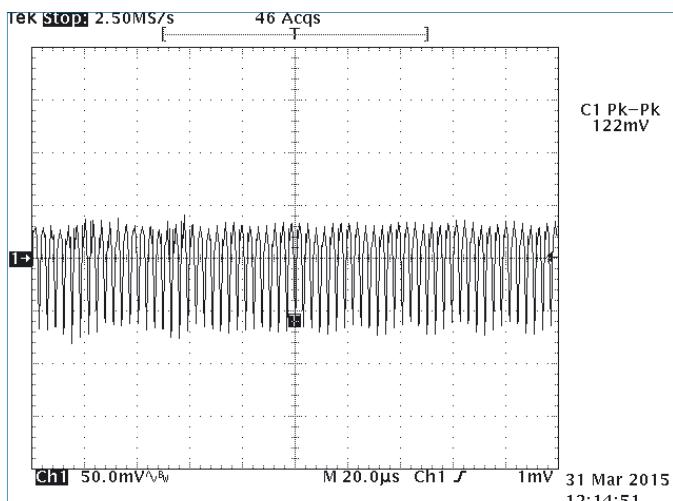

Auxiliary supply limited to 1mA. Referred to RTN

## Paralleling signal (PR)

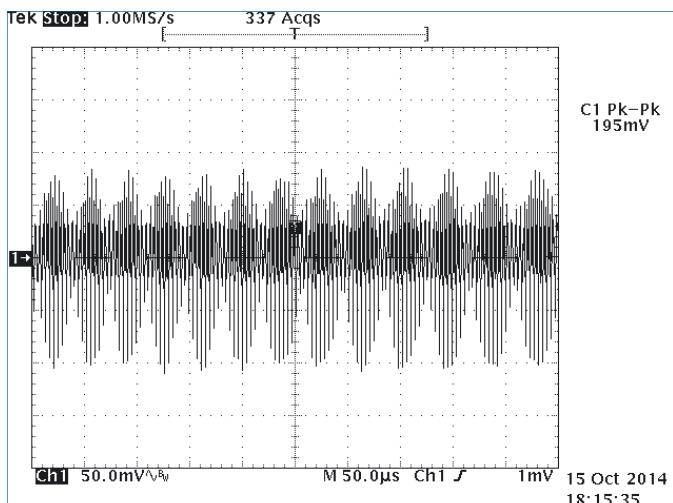

Parallel only identical outputs (voltage and power). Outputs in parallel will current share when their corresponding PR are connected together. When outputs are coming from different boards, RTN have to be connected together.

## Waveforms

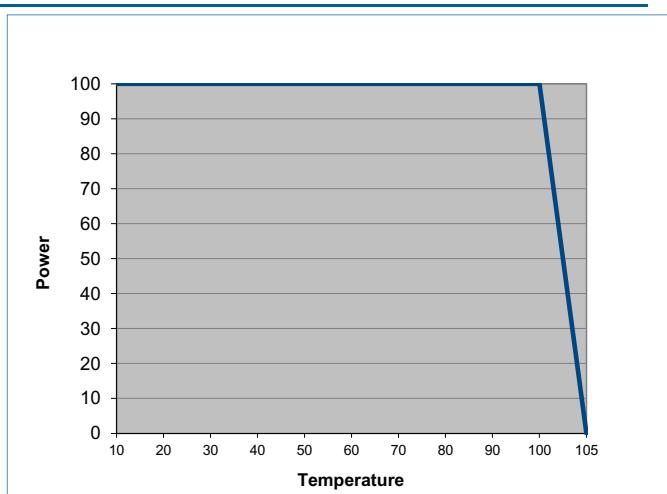

### output noise - PST21A-5300-48150-550-3V375

### output noise - PST21A-48600-48600-M

## Derating

## Safety & Installation

These converters are components, intended exclusively for integration into other equipment by an industrial assembly process or by a professionally competent person. Installation must strictly follow the safety regulations in respect of the enclosure, mounting, creepage and clearance distances, markings of the end-use application.

Connection to the system shall be made via the male connector Wurth.

The AC/L is internally fused. This fuse is designed to protect the converter against overcurrent caused by a failure, but may not be able to satisfy all requirements. External fuses in the wiring circuit to one or both input pins may be necessary to ensure compliance with local requirements.

Do not open the PSU, or the warranty will be invalidated. Make sure that there is sufficient thermal baseplate dissipation (max. temperature : 100°C). This should be verified by measuring the case of temperature at the specified measuring point, when the converter is operated in the end-use application.

### Cleaning Agents and Process

The converters are not hermetically sealed. In order to avoid possible damage, any penetration of liquids shall be avoided.

### Isolation

The electric strength test is performed in the factory in accordance with IEC/EN 60950.

## Standards and Approvals

The converters are built to meet the safety standards IEC 60950-1, EN 60950-1.

'Built to meet' mentioned in the different paragraphs of the datasheet means that Power System Technology has designed the product to meet the standard but not certified it in a laboratory.

'Qualified' means that the test has been made in a certified laboratory.

### Electric Strength

Characteristic		Input to Earth	Input to Output	Output to Earth	Output to Output	Unit
Electric strength	Design strength	1500	3000	500		Vrms
	Factory test for production units (>10s)	2000	2000	500		Vdc
Insulation resistance				> 100	>100	Mohms

### Temperatures

Conditions	Standard			T option			Unit
	Min.	Typ.	Max.	Min.	Typ.	Max.	
Ambiant	-20		+71	-40		+71	
Heatsink	-20		+100	-40		+100	
Storage	Not operating	-40		+125	-40		+125

In operation, there is no power derating as long as the baseplate temperature is in the below indicated range.

### Reliability

MIL-HDBK-217F, notice 2	Model	Heatsink Temp.	GB	GF
MTBF ( Hours )	PST21A 3 outputs	40°C	285000	165000
		70°C	139500	82300
		100°C	86600	51000

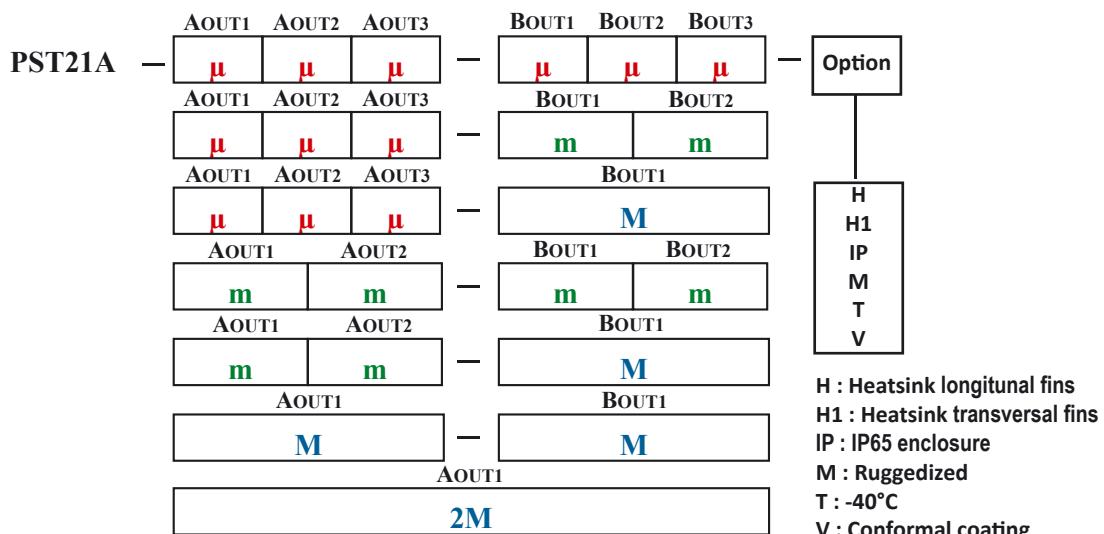

MTBF calculation for a specific part number has to be ordered.
