ELECTRICAL SPECIFICATIONS (CONT')

Output Specifications

Long Term Stability..... 0.01% after 20 minute warm-up.

OVP.....Set at 115% to 135%.
Latching method. DC must be recycled to restart the unit.

Short-circuit Protection.....The units will withstand a continuous short without damage. It will automatically return to regulation upon removal of the short.

Overload Protection.....The overload protection feature will reduce the output voltage to a safe dissipation level when the output power rating exceeds 110% of maximum rated power. The unit will automatically return to regulation upon removal of the overload.

ORing FET.....ORing FET provided for redundant operation.

Active Current Share12V Output will current share within 5% when interconnected by a single wire

Passive Current Share5VSBY droop type

Remote Sensing12V Output only

PS_ONDigital Input: A logic low enables the Main output of the supply.

EnableDigital Input. When driven high, main output is disabled. When Low, power supply main output state is as controlled by PS_ON.

FAL/PWR_FAILDigital output, Open Collector, driven high when outputs are in regulation.

DEG Open Collector, temperature warning signal A TBD temperature will change signal state from Hi to Low or Low to Hi (programmable preferences)

PS PresentDigital Output. Pulled low via 100 Ohm resistor

Thermal Protection.....The power supply has a built in thermal sensor to protect against abnormal temperature conditions.

I²C/PMBUS.....Monitors temperature, output voltage, and output current, connects to a serial NVRAM which is programmed with serial number. PMBUS Standard to allow monitoring of overall operation of power supply.

LED IndicatorsThe power supply will have two LED's providing the power supply status:

All outputs are operating within spec	Steady Green
Standby (PSON disabled)	Blinking Green
Voltage or Temperature warning	Blinking Yellow
Voltage or Temperature fault	Steady Yellow
PSKILL and/or power supply off	NO LED's
