

TK Hamilton PRP[®]-h1 HPLC Columns

Hamilton PRP[®]-h1 Polymer HPLC Columns

- Chemical Stability
- Full pH Range Stability
- Temperature Stability

The PRP-h1 column line from Hamilton offers a robust alternative to silica based and traditional polymer HPLC columns.

Total Compatibility

The PRP-h1 is a high performance, polymeric, reversed-phase column that delivers separations of a wide variety of analytes under the most extreme analytical conditions. Virtually any organic solvent and mobile phase additives can be employed to optimize analyte separation.

Extended Column Life

Because there is no bonded phase in polymer materials as is the case with silica columns, even harsh solvents such as 1 molar sodium hydroxide can be used to wash contaminants from the column, thus increasing column lifetime.

Mobile phases with pH ranging from 1 to 13 can be used without damaging or degrading the stationary phase. This wide pH range opens up more possibilities of solvents and buffers that can be used to elucidate a great separation.

Wide Temperature Range

Common HPLC separation temperatures range between 20 and 85 °C and in some cases may go above 100 °C.
