

Pressure Relief Valve DBD 06

Pressure Relief Valve

direct operated

Nom. size : 06
Nom. flow capacity : 40 l/min
Nom. operating pressure : 400 bar

Description

Direct spring pressure relief valve, type DBD, are suitable for inline mounting and serve for limitation of operating pressure in hydraulic systems.

The operating pressure is optionally adjustable by hexagon socket grub screw (with protection cap) or by knob.

The relief valves are available in different pressure ranges. The valve is equipped with a valve seat sealed by a spring loaded poppet.

If the set spring force is overcome by the line pressure the poppet lifts up from the seat and gives free flow from pressure to drain chamber.

The valves are available as cartridge or inline pressure relief valves.
