**PixeLINK offers a line of digital imaging solutions for Microscopy and Life Sciences**

Capture SE has a menu system similar to most Windows applications, making it easy to navigate.

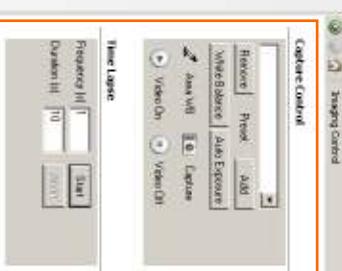

The Standard toolbar contains standard functions such as New, Open, Save and Print.

The Image Processing toolbar allows you to make changes to both streaming video and captured images that alter the way images are displayed and rendered.

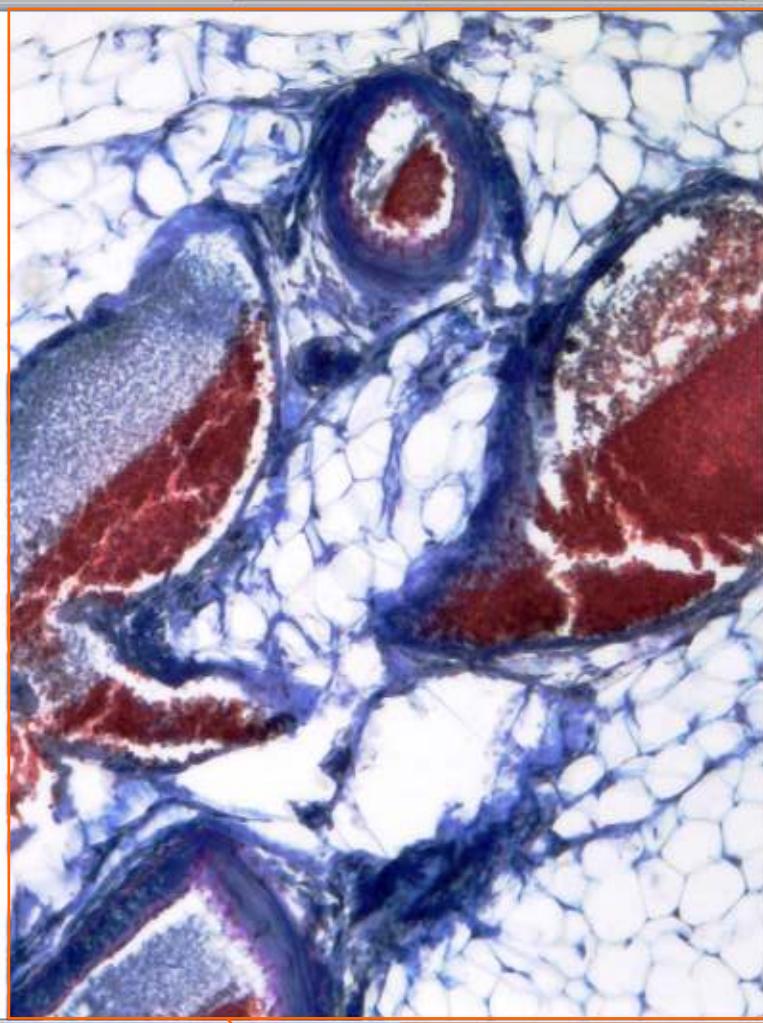

The Imaging control Panel groups all the controls used in the image capture process together. It contains 5 sub-panels: Capture Control, Time Lapse Imaging, Camera Control, Image Orientation and Capture Options. Combined, these sub-panels contain powerful tools and functions needed to capture images in microscopy applications.

The Image Measurement toolbar provides a rich set of tools used to take measurements of elements within a captured image, and saves both image and measurement data together.

The Annotation toolbar provides all the tools necessary to markup images with comments, shapes and diagrams for collaborative purposes.

The Live Preview window displays either a captured image or video stream from your PixeLINK camera.

The Histogram window displays the dynamic range for either the video stream or the active captured image.

The Help Desk window provides information on all the tools in Capture SE that require more than a single mouse click.

The Database window displays a list of all the images added to the built-in database in Capture SE. This

database facilitates the archiving and retrieval of captured images.

The Measurement Results window holds and displays the measured parameters for the selected image.
