

# Single-Output: 5000 W GPIB

Proven reliability  
 Increase test throughput  
 with fast up and down programming  
 Fast reaction to analog programming signals

**Reliable dc power for manufacturing test and long-term burn-in**  
 This series of 5000 watt dc power supplies has the exceptional, proven reliability that test system engineers look for. It also has the features needed for easy test system integration.

Programming of the dc output and the extensive protection features can be done either from the front panel or using industry standard SCPI commands, via the GPIB. Using the serial link, up to 16 power supplies can be connected through one GPIB address. Test system integration can be further simplified by using the *VXIPlug&Play* drivers. The output voltage and current can also be controlled with analog signals. This is helpful for certain types of noisy environments, and also immediate reactions to process changes.

The 6680A Series has extremely low ripple and noise for a 5000 watt dc power supply. This helps the built-in measurement system make extremely accurate current and voltage measurements.

Selectable compensation is provided for problem-free powering of inductive loads.

### Supplemental Characteristics for all model numbers

**dc Floating Voltage:** Output terminals can be floated up to  $\pm 60$  Vdc maximum from chassis ground

**Remote Sensing:** Up to half the rated output voltage can be dropped in each load lead. The drop in the load leads subtracts from the voltage available for the load.

**Command Processing Time:** Average time required for the output voltage to begin to change following receipt of digital data is 20 ms for power supplies connected directly to the GPIB

**Modulation:** (analog programming of output voltage and current):

**Input Signal:** 0 to  $-5$  V for voltage, 0 to  $+5$  V for current

**Input Impedance:** 30 k $\Omega$ /or greater
